

DEACTIVATOR

FOR AM LABELS
58kHz EAS SYSTEM

Distance Deactivation

Confirmation of Deactivation

Double Checker Mode

Laptop Tunable

Audible/Visible Alarm

High Throughput

Dexilon AM Label DEACTIVATOR is a very compact, all in one, distance active deactivator designed to be installed in a wide variety of places.

Unlike other deactivators, Dexilon AM label deactivator will detect, deactivate and confirm the deactivation in a fraction of a second up to 15 cm above the pad. Any direct contact with the label is unnecessary, allowing quick operation and avoiding needless loss of time at the Point Of Sale. It is equipped with light and audible signals.

Its advanced, state of the art, fully digital signal processing allows to work under challenging conditions.

It is fully tuned through our integrated, intuitive and easy to use tuning software leading to quick phasing and service.

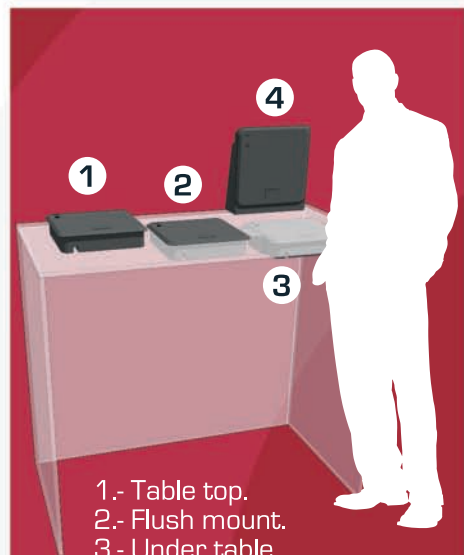

The deactivator has an elegant and functional design. It is easy to install anyway and anywhere: Flush mount, under the table (ACC-DEACTHOLD needed) or vertical mount (ACC-DEACTVERT needed).

All the electronics are located inside of the pad, so no extra electronics or power supplies installation is necessary.

The deactivator is available in several colours. Standard colours are white, black and grey. Other colours under demand.

DIFFERENT WAYS OF INSTALLATION TO ADAPT TO ANY STORE REQUIREMENT

- 1.- Table top.
- 2.- Flush mount.
- 3.- Under table.
- 4.- Vertical mount.
